Services

Create example data pipeline   ⋯

Combine multiple services into a data pipeline with this example guide.

Create example data pipeline

Create new service

PostgreSQL®
PostgreSQL - High-performance relational database with advanced extensions

MySQL
MySQL - Popular general-purpose easy-to-use relational database

Valkey   `New`
Valkey - High-performance key/value datastore

Apache Kafka®
Kafka - Distributed event streaming platform for high-throughput data pipelines

Aiven for Metrics   `New`
Thanos Metrics - Scalable Prometheus query solution

Dragonfly
Dragonfly - Scalable in-memory data store for high-performance workloads

OpenSearch®
OpenSearch - Distributed real-time search and analytics

Apache Cassandra®
Cassandra - Distributed NoSQL scalable database for large data volumes

Aiven for Caching
Caching - Compatible with legacy Redis® OSS

Create MySQL service

MySQL

MySQL - Popular general-purpose easy-to-use relational database

| Free	●
Free plan	
• One free managed MySQL service	
• Good for building a small application and learning to use cloud databases	
• No credit card required	

Trial	○
Full platform	
• 30-day trial with $300 of free usage included	
• Good for proof of concepts and testing Aiven for production use cases	
• No credit card required	

1. Select cloud provider

aws   DigitalOcean

2. Select service region

Asia Pacific   **Europe**   North America

aws-eu-north-1

⚑ Sweden - Amazon Web Services: Stockholm | 🔗 Privatelink available
